Assignment-1

Create a small application of your choice and containerize it using Docker Compose. The application should include at least 10 microservices, including databases

Deliverables:

1. All source code for services (each service in its own folder).
2. One `Dockerfile` per service.
3. `docker-compose.yml` (single file)
4. Screenshots showing all containers running and up in browser.
5. A single PDF report that includes: architecture diagram of your application, screenshots, and short explanations.

Submission format: A zipped repository containing the code and docker files *plus* the PDF.

Note: No group submissions.
